

HOW MEDICAID CARES FOR PENNSYLVANIANS

Medicaid is more than a health care program. It is an investment in the health of our communities.

Pennsylvania Medicaid Enrollment: 3M

23% of Pennsylvanians enrolled in Medicaid:

- Children
- People with disabilities
- Lower income adults (61% are working)
- Older adults

Health Care At Risk

Pennsylvania Medicaid has been chronically underfunded. Federal cuts will make the program even less sustainable.

Pennsylvania hospitals receive just **71 cents** for every dollar it costs to care for Medicaid and uninsured patients.

Cuts will reduce that amount to **64 cents**.

Many Pennsylvania hospitals are operating at a loss or with unsustainable, low margins.

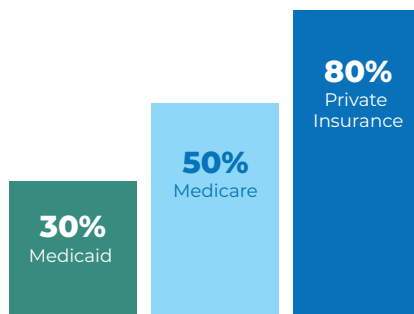

Care across the Lifespan

Pennsylvania Medicaid covers:

- About **35%** of births
- More than **1/3** of children
- Nearly **2/3** of all nursing home residents

Cost-Effective Care

Medicaid is a partnership between the state and federal governments to protect health care for children, people with disabilities, older adults, and low-income families.

Medicaid per-enrollee spending has increased much less than other payors since 2008

Coming Changes

As many as **310,000** Pennsylvanians could lose coverage due to federal changes to Medicaid enrollment and eligibility.

As a result, Pennsylvania hospitals will see a **39–66%** increase in the uncompensated care they must absorb as a percentage of net patient revenue.

This makes communities less healthy and puts additional strain on access to care throughout the commonwealth.
